Whitepaper 2021

https://btci.finance

Introduction

The latest wave of DeFi protocols, we have discerned various platforms occur that enable users to stake their funds in return for the protocols tokens.

The majority of this action has been focused on the Ethereum block chain. As one of the fastest block chains supporting smart contracts, it has a sprawling population of users, developers and equipment for building important decentralized application.

What is BTCI?

BTCI ($BTCI) is a Decentralized Exchange for instant swap of Bep-20 token with unique features of Limit Orders, Stop Losses, Sniper, Staking, Yielding form NFTs and wallet cross chain networks and many more.

About BTCI

BTCI is built on Binance Smart Chain

Considering its position in the Binance Smart Chain ecosystem. BTCI contains unique features of Limit Orders, Stop Losses, Sniper, Staking, Yielding form NFTs and wallet cross chain networks and many more. BTCI ($BTCI) is the dream home of traders on DeFi World and can be seen as the Pancakeswap of the Bsc network.

BTCI ($BTCI) swap uses an automated market maker (AMM) model. This implies that while you can swap digital assets on the platform, there isn't order book where you are filled with anyone. Rather, you trade against a liquidity pool.

Limit Order

BTCI aims to bring in Centralized Exchange (CEX) features that allow BTCI users and PancakeSwap to get their swaps at desired prices by leaving instructions to fill buy or sell orders at a specific prices or (better prices). For instance if you think an asset is too expensive at the moment or you are expecting price to drop throughout the day then you simply set a Limit Order to buy at a price below the current market price.

The introduction of Limit Buy/Sell Orders is massive for Binance Smart Chain as it enables users to take profits on the platform and exit in time. BTCI users will now have the capacity to effectively buy dips/take profits to take advantage of volatility in the crypto market.

Stop Losses

BTCI provides another trading feature that allow BTCI and PancakeSwap users to set a maximum allowable loss by activating a market order once a stop price has been met. For instance, if you are holding a token but you would definitely liquidate everything if it were to loss 70% of its value to limit your loss, then you simply need to set the lowest maximum price you would sell and if the market price hit that, your assets are all sold.

Sniper

BTCI Sniper Bot allows you to buy any newly added token from PancakeSwap, Poocoin, Dxsale and any other project that launches tokens in a fast speed rate. (Up to zero seconds from the time of the listing). BTCI Snipping will make a big profit for users who uses this new feature. $BTCI snipping tool is quiet easy to use, just place a wallet which the bot will send the bought tokens. The bot only buys the tokens based on the input/amount you configure it to, remember it does not sell them.

Limit Order, Stop Losses and Sniper Fees

BTCI Limit Order, Stop Losses and Sniper charges a 1.5% fee on transactions to reward liquidity providers (LPs). A portion of these fees profits will be distributed to LP Stakers, who receive a 400% annual percentage yield (APY). The rest of the profits go to BTCI developers to further expand the project on Binance Smart Chain (BSC).

BTCI native $BTCI Token is used to pay for a Limit Order and Stop Losses fees and other features on the platform, all users are required to hold an
$BTCI balance to utilize the BTCI functionality.

Farm

BTCI (BTCI) Farm is the method of staking or locking crypto currency in decentralized finance to earn rewards. The theory of $BTCI farming is an aggregate called liquidity mining which has been developed from the decentralized financial sector. Generally a personal staking can earn token in return for their participation in the application.

Stake

BTCI ($BTCI) Staking is the method of energetically contributing in the confirmation of transaction on the blockchain with a proof of stake (POS) mechanizing anyone with the lowest balance expected to stake a particular cryptocurrency can also confirm transactions on the blockchain and earn reward for this process.

The user assets reserved in a system that enables the staking operation for a specific duration of time and during the storage operation you can earn incomes for a specific duration of time. This process rewards users that have staked a quantity of assets in the network and play a role in the network strength. The locked of crypto asset or currency will provide to confirming all the hopes of the stakeholders in the network and keeps it growing.

NFT

BTCI Card is an utility that will be issued on our smart contract serve as a share/form of NFT, this will be given to initial investors who have participated in the presale via our contract address and buy with a minimum of 1 BNB through self-drop system.

Cross Chain Wallet

BTCI Cross Chain Wallet enables blockchain to communicate to one another. This will be made available on iOS, Android and Web extension with several features.

Games

Today, the majority of games nowadays circulating are online games with a centralized network, this centralized network implies that all data both logins and passwords are stared on the server and regulated by the administrator or owner of the game app. This is different from the blockchain game and Dapp concept, no data stored and regulated by the administration system that is transparent.

Buy – Back

Bi-Weekly, Buy-Back Strategy is the method of establishing the price and processing of BTCI in circulation. This gives rise to each asset and has the ability for financial development of investors. This strategy shows that the industry have enough equity to run the projects smoothly with the rewards and prices for investors in the form of BTCI.

Tokenomic

Token Information

- ❖ Token name: **BITCOIN INTERNATIONAL**

- ❖ Token symbol: **BTCI**

- ❖ Token decimal: **9**

- ❖ Token address: 0x79f8e9862c5240f316fabf31e5406e497d65484d

- ❖ Token supply: 98.421.978 **BTCI**

- ❖ Network: **BEP20**

- ❖ Blockchain: **Binance Smart Chain (BSC)**
